HELP ME MARKETING

VISUAL GUIDE

SEO Growth OS

Know what is checked.
See what can be automated.

A practical guide to recurring checks, draft recommendations and progress tracking for your website.

Website health
Find access and technical issues.

Search performance
See where visibility changes.

Content
Identify pages needing attention.

AI visibility
Record mentions and citations.

Measurement
Check what the figures mean.

Progress
Keep findings and changes connected.

HOW TO READ THIS GUIDE

- REPEAT — configured checks can run again.
- DRAFT + REVIEW — prepare suggestions for a person to assess.
- HUMAN REVIEW — judgment or validation is required.
- ON CHANGE — a check around a release, fix or redesign.

Available checks and automation are confirmed during setup. Tools, access and schedules must be configured and tested. This guide is not an audit of your website.

HOW IT WORKS

How a run works

Six stages, from your brief to a verified change. The next run starts from the last.

1
Brief & access
Your goals, priority pages and the tools you connect.

2
Collect evidence
Website, search and analytics data, each dated.

3
Run the checks
Selected checks across the six areas.

4
Diagnose & prioritise
Shared causes combined; each fix weighed.

5
Draft & approve
Briefs, links and markup prepared for your approval.

6
Verify & monitor
Confirm it is live, then watch for change.

Repeat on an agreed schedule, or around a release

HOW EACH FIX IS WEIGHED

- Severity
- Opportunity
- Evidence
- Risk
- Effort & readiness

Each dimension is judged on its own. There is no single combined score.

THEN GROUPED BY WHAT TO DO NEXT

1. Urgent verified issues
2. Low-risk evidenced improvements
3. Larger planned improvements
4. Experiments with a decision rule
5. Investigations blocked by data
6. Defer or leave unchanged

WHAT YOU RECEIVE

A plain-language report
Status and coverage for each area, findings and next actions.

A working record
Evidence, findings, decisions and changes, kept between runs.

An acceptance check
Every recommendation says how to confirm it was done.

01 / SIX AREAS

Website health

Spot problems before they become routine.

Crawl access & indexing

REPEAT

Robots rules, noindex, canonical URLs and status codes.

Output: Flag affected URLs; Google indexing needs account evidence.

Broken links & redirects

REPEAT

Links that fail, plus redirects that take multiple hops.

Output: A source-to-destination list for review and repair.

Sitemap discovery

REPEAT

Listed URLs, their reachability and sitemap consistency.

Output: URLs to investigate or update in the sitemap.

Page performance

REPEAT

Lab speed checks and real-user data when available.

Output: Page-specific diagnostics, with lab and field data separated.

Forms & mobile journeys

HUMAN REVIEW

Navigation, enquiry paths and small-screen usability.

Output: Observed barriers; submissions tested only with permission.

Structured data validity

REPEAT

Whether page markup parses and passes supported validation.

Output: Validation findings tied to the affected page.

Structured data accuracy

HUMAN REVIEW

Whether markup reflects the visible page and business.

Output: Corrections or draft markup for developer review.

Images & alt text

DRAFT + REVIEW

Missing descriptions and media affecting page performance.

Output: Flagged images; a person checks description usefulness.

Launch & redesign checks

ON CHANGE

Selected URLs and journeys before and after a release.

Output: A comparison showing regressions and unresolved checks.

WHAT THIS NEEDS

Public website; Search Console for Google indexing; lab and field performance sources where available.

02 / SIX AREAS

Search performance

Find the pages that deserve a closer look.

Page & query monitoring

REPEAT

Impressions, clicks, CTR and position over comparable periods.

Output: Flag changes by page or query, with country filters agreed at setup.

Search intent review

HUMAN REVIEW

Whether a page answers the need behind its search queries.

Output: A recommendation to clarify, expand or refocus the page.

Competitor opportunities

HUMAN REVIEW

Relevant competing pages and gaps in the topics covered.

Output: Evidence-backed opportunities for your business to assess.

Backlink review

HUMAN REVIEW

Who links to you and competitors; unusual patterns worth investigating.

Output: Findings with source limits, not automatic disavow advice.

Local search & maps

REPEAT

Profile details and location-specific search observations where supported.

Output: Dated observations for agreed services and locations.

Online store listings

REPEAT

Product pages, product markup and available Merchant Center issues.

Output: Product or account issues to review with your store team.

Language & country versions

REPEAT

Hreflang relationships and consistency across relevant versions.

Output: Affected URLs and configuration issues for review.

WHAT THIS NEEDS

Search Console; relevant location, merchant, competitor or link data. Some sources have their own costs.

03 / SIX AREAS

Content

Turn a page-level finding into a useful brief.

Page basics

REPEAT

CHECKS
Titles, descriptions, headings and links on selected pages.

YOU RECEIVE
A page-specific list of missing, conflicting or unclear elements.

Content quality & freshness

HUMAN REVIEW

CHECKS
Customer questions, factual accuracy, relevance and outdated information.

YOU RECEIVE
Sections to clarify or update, with the reason for each recommendation.

Internal links & site structure

DRAFT + REVIEW

CHECKS
How priority pages connect and where relevant links could help visitors.

YOU RECEIVE
Suggested source page, destination and link wording for approval.

Content briefs & recommendations

DRAFT + REVIEW

CHECKS
Evidence from the review, page purpose and the intended customer action.

YOU RECEIVE
A draft brief with proposed changes, supporting evidence and acceptance checks.

WHAT THIS NEEDS

Public pages, business knowledge and connected search data where relevant. All proposed changes require review.

04 / SIX AREAS

AI visibility

Keep a dated record of what AI answers show.

Answer suitability

HUMAN REVIEW

CHECKS
Whether pages clearly answer customer questions and support business claims.

YOU RECEIVE
Recommendations to improve clarity, completeness and supporting evidence.

Google AI observations

REPEAT

CHECKS
Whether your business or pages appear in selected Google AI answers, where checks are supported.

YOU RECEIVE
The question, date, context and observed mentions or citations.

Other AI mentions & citations

HUMAN REVIEW

CHECKS
Selected assistant responses: business mentions, cited pages and factual accuracy.

YOU RECEIVE
Dated responses and citations, with inaccuracies or omissions flagged.

WHAT THIS NEEDS

Agreed questions, target locations and access to selected AI tools or observation sources. Availability varies.

A repeated observation is not a fixed AI ranking or a promise of citation.

05 / SIX AREAS

Measurement

Understand whether recorded activity is useful.

Define a meaningful result

HUMAN REVIEW

CHECKS
Which actions count as enquiries, bookings, purchases or other business outcomes.

YOU RECEIVE
An agreed measurement definition before interpreting performance.

Check actual event behaviour

HUMAN REVIEW

CHECKS
Whether the intended action produces the expected tracking event.

YOU RECEIVE
A distinction between configured tags and observed events; tests need approval.

Consent behaviour

HUMAN REVIEW

CHECKS
What tracking does when a visitor accepts or declines consent.

YOU RECEIVE
Observed behaviour and gaps to review with the site owner.

Match leads to real records

HUMAN REVIEW

CHECKS
Whether recorded enquiries align with available CRM, booking or sales records.

YOU RECEIVE
Discrepancies and evidence gaps, without treating every event as a customer.

Data quality

HUMAN REVIEW

CHECKS
Test traffic, filters, time zones and date ranges that can distort comparisons.

YOU RECEIVE
Corrections to investigate before drawing conclusions from the numbers.

WHAT THIS NEEDS

Analytics and tag access, agreed business outcomes, and enquiry or CRM records where permission is granted.

06 / SIX AREAS

Progress

Make the next run build on the last one.

A dated change record

REPEAT

CHECKS
Findings, recommendations, decisions and changes from each run.

YOU RECEIVE
A persistent record showing what remains open and what changed.

Implementation verification

ON CHANGE

CHECKS
Whether an approved edit is live and meets its acceptance checks.

YOU RECEIVE
Live, partly live, not yet live or unable to verify, supported by evidence.

Monitoring & alerts

REPEAT

CHECKS
Agreed checks for regressions or notable changes against a suitable baseline.

YOU RECEIVE
Flagged changes with context; missing evidence is kept visible.

Recurring summaries

DRAFT + REVIEW

CHECKS
New findings, unresolved issues, completed work and decisions still needed.

YOU RECEIVE
A concise update and a prioritised action list for review.

WHAT THIS NEEDS

The previous run, change history, agreed checks and approval records. Scheduling depends on the configured environment.

FROM CHECK TO ACTION

What a run gives you

A real example from my own website, recorded on 10 November 2026.

01 **Find the signal**
A commercial page had limited search visibility. The run flagged it for investigation.

02 **Check the evidence**
Indexing status and internal links were reviewed. Weak linking was treated as a hypothesis, not a proven cause.

03 **Prepare the brief**
The draft named the pages to edit and proposed clearer internal-link wording for approval.

04 **Verify, then measure**
The workflow separates confirming the edit is live from assessing later search performance. This example does not claim a ranking lift.

SETUP AROUND YOUR BUSINESS

Choose priority pages and outcomes. Connect the required data. Test the checks and handoffs. Agree a schedule and review process.

Some checks need a signed-in browser and an available device. The checks in this example were tested end to end; the first scheduled weekly run had not yet happened when this guide was prepared.

Want these checks set up for your business?

Tell me your website, the tools you use and what you want to automate.
