HELP ME MARKETING

SEO GROWTH OS VISUAL GUIDE

SEO Growth OS

Find the checks your business needs.

Explore the website and search checks I can help automate, the recommendations they produce and where your review is needed.

Where should you start?

WHAT YOU ARE EXPERIENCING	START HERE
Important pages rarely appear in search	**Search performance and indexing checks**
People visit but few enquire	**Conversion and measurement review**
Unsure whether AI tools mention your business	**AI visibility checks**
Problems return after website updates	**Change verification and monitoring**
SEO findings pile up without action	**Prioritised briefs and progress tracking**

Six areas

Website health
Access, links, speed and markup.

Search performance
Visibility, intent and opportunities.

Content
Page basics, links and briefs.

AI visibility
Answers, mentions and citations.

Measurement
Enquiries, events and data quality.

Progress
Priorities, verification and records.

How to read the labels

SCHEDULED CHECK	Can run on an agreed schedule after setup and testing.
DRAFT + REVIEW	Prepares suggestions for a person to assess.
HUMAN REVIEW	Needs judgment or validation.
ON CHANGE	Runs around an update, fix or redesign.

Checks depend on your website, connected tools and data. Automation is configured during setup, and you approve changes before anything is published.

WEBSITE HEALTH & SEARCH PERFORMANCE

Can people and search engines reach the right pages?

Access, indexing & sitemaps

SCHEDULED CHECK

Checks Status codes, robots directives, noindex, canonical URLs and sitemap inclusion.

Automates Reruns the agreed URL checks and compares them with the last run. Public website signals are kept apart from Google's recorded indexing status, which needs Search Console.

You receive Affected URLs, the issue on each and the next step.

Links, redirects & website updates

SCHEDULED CHECK · ON CHANGE

Checks Broken links, redirect chains, and selected pages and journeys before and after a release.

Automates Retests links and redirects on the agreed pages. Around a release, compares before and after.

You receive Affected source and destination URLs, plus regressions found after a release.

Performance & media

SCHEDULED CHECK · DRAFT + REVIEW

Checks Lab speed on key pages, real-user data where Google has enough, missing image descriptions and media that slows pages.

Automates Retests the agreed pages against earlier results. Flags images without descriptions and drafts them.

Review A person checks that each description is useful.

You receive Page-specific diagnostics, with lab and real-user data kept apart, and flagged images.

Structured data

SCHEDULED CHECK · HUMAN REVIEW

Checks Whether markup is valid, and whether it matches the visible page and your business.

Automates Validates markup on the agreed pages and flags new errors.

Review Accuracy against the page and business is checked by a person.

You receive Page-specific findings and draft corrections for your developer.

Search performance & opportunities

SCHEDULED CHECK · HUMAN REVIEW

Checks Page and query impressions, clicks, CTR and position across comparable periods. Search intent, competitor pages and backlinks.

Automates Collects connected search data, compares agreed periods and flags changes.

Review Intent, competitor and backlink findings need interpretation. Backlinks are investigated, never auto-disavowed.

You receive Pages or opportunities to investigate, with the evidence behind each.

Local, store & international

SCHEDULED CHECK · ONLY WHERE IT APPLIES

Checks Local: Business Profile details and location searches. Store: product pages, product markup and Merchant Center issues. International: language and country versions.

Automates Repeats supported observations and rechecks product markup and version links.

You receive Dated location observations, product or account issues, and affected URLs between versions.

CONTENT & AI VISIBILITY

Do your pages answer the questions customers ask?

Page basics & content freshness

SCHEDULED CHECK · HUMAN REVIEW

Checks Titles, descriptions and headings. Customer questions, accuracy and outdated information.

Automates Rechecks titles, descriptions and headings on the agreed pages and flags new problems.

Review Accuracy, freshness and wording are an editorial judgment.

You receive Page-specific issues and sections to update, with the reason for each.

Internal linking

DRAFT + REVIEW

Checks How priority pages connect, and where a relevant link would help visitors.

Automates Inspects crawlable links and prepares suggested additions.

Review You review relevance and wording.

You receive Source page, destination and suggested link wording.

Content briefs

DRAFT + REVIEW

Checks The page's purpose, the intended customer action and the evidence from the review.

Automates Drafts the brief from the available evidence.

Review You approve the changes and wording.

You receive A brief saying what to change, why, and how to verify it was done.

Location & service pages at scale

HUMAN REVIEW · OPTIONAL

Checks Pages built from one template: useful differences, factual consistency, internal links and indexing directives.

Review Similarity is a starting point for review, not a pass mark. Nothing is published in bulk.

You receive Pages to improve, merge, link or keep out of the index, with the reason for each.

Answer suitability

HUMAN REVIEW

Checks Clear answers to customer questions, accurate business information and evidence for claims.

Review Suggestions can be drafted; clarity and accuracy are judged by a person.

You receive Specific sections to clarify or strengthen.

AI mentions & citations

SCHEDULED CHECK · HUMAN REVIEW

Checks Selected Google AI answers and other assistant responses to agreed questions.

Automates Repeats supported Google AI observations on a schedule.

Review Other assistants are checked in a browser or by hand. Accuracy is judged by a person.

You receive Question, platform, date, observed mention, citation and accuracy concerns.

AI answers vary; observations are recorded with their date and context.

MEASUREMENT & PROGRESS

Are enquiries being measured, and is the work moving forward?

Conversion & enquiry journey

HUMAN REVIEW

Checks Offer clarity, calls to action, form usability and friction on phones and desktops.

Review A person walks the journey. Forms are submitted only with your permission.

You receive Observed barriers, with recommendations or test ideas.

Events & consent

HUMAN REVIEW

Checks Whether intended actions produce the expected events, and how tracking responds to consent choices.

Review Configured tags are kept apart from behaviour observed in a test. Tests need your approval.

You receive What fires, what does not, and the gaps to fix.

Real enquiries & data quality

HUMAN REVIEW

Checks Which actions count as a result, whether recorded leads match your business records, and test traffic, filters, time zones and reporting dates.

Review Records are compared only with your permission.

You receive Discrepancies, and which figures can be relied on.

Priorities & draft actions

DRAFT + REVIEW

Checks Recommendations consider the seriousness of the issue, the opportunity, strength of evidence, implementation risk, effort and dependencies.

Automates Combines related findings and drafts a prioritised plan.

Review You decide what goes ahead.

You receive What to address now, investigate, test or leave unchanged.

Change verification & monitoring

ON CHANGE SCHEDULED CHECK

Checks Whether approved changes are live, whether their acceptance checks pass and whether problems recur.

Automates Rechecks observable changes and reruns the agreed checks against a baseline.

You receive A confirmed status with evidence: live, partly live, not yet live or unable to verify. Business impact is assessed separately.

Change record & recurring summary

SCHEDULED CHECK DRAFT + REVIEW

Checks New findings, decisions, completed work, unresolved items and approvals needed.

Automates Adds each run to the record and drafts the summary.

Review You review the summary before it is shared.

You receive A concise update backed by a dated working record.

HOW IT WORKS & NEXT STEP

From a finding to a clear next action

1 **Brief & access** → 2 **Collect evidence** → 3 **Run the checks** → 4 **Diagnose & prioritise** → 5 **Draft & approve** → 6 **Verify & monitor**

The stages can span more than one run. Each run builds on the previous record, and not every finding leads to a change in the same run.

AN EXAMPLE FROM MY OWN WEBSITE

Process example, recorded 10 November 2026

A run flagged a commercial page with limited search visibility. It checked indexing and internal links, then prepared a brief naming the pages to edit and the proposed link wording.

The proposed change required approval. Confirming implementation and assessing later search performance are separate steps.

What you receive

- A clear report with findings and priorities.
- Draft briefs or recommendations for review.
- A dated record of decisions and changes.
- A way to verify each recommended change.

What setup needs

- Your website and priority outcomes.
- Access to the agreed data sources.
- Selected checks, a tested schedule and a review process.

Some checks need paid tools or an available signed-in browser; requirements are confirmed during setup.
